

GoCAALDO

DESIGN RADIATOR

THE FIRST PERSONAL
SUSTAINABLE RADIATOR
Made with marble
dust waste

MARMO
THINK RECYCLED

GoCAALDO

WHY

GoCAALDO, the new MAARMO's electrical radiator made with marble dust waste; it's thought to solve the problems that everyone has in the daily management of towels, bathrobes and clothes.

HOW

- It makes you find your lukewarm bathrobe at the exit of the shower
- It doesn't promote the diffusion of germs and eliminates the smell of moisture
- It cools the clothes in the changing rooms of homes and hotels
- It quickly dries damp rags used by the home chefs

Thanks to the facility of placement and the small size, it's a useful helper in any case, to bring warmth and wellness in every space of home and office, too.

GoCAALDO

Design radiator made with marble dust waste, provided by a digital thermostat. Thanks to its technology developed by MAARMOLAB,

GoCAALDO is able to heat up deeply and to hold back the warmth with the "stone effect" in order to reduce the consumptions.

Informazioni tecniche

Material: marble recycled dust waste

Colours: available in all the colours of the world, moreover it can be customizable with HD digital painting.

Power: 250 WATT

Versioni

Smart: starting and switching off programmable.

Digital Smart: starting and switching off programmable and management by APP Smartlife remotely and standard system ALEXA

Maarmo's productive process

Maarmo reuses and recycles the marble dust waste thanks to an accurate selection work in the caves of Verona. The formula allowed us to generate a design radiators' range, that doesn't need a cooking phase,

but a "sweet" aging phase, that lasts from 48 to 72 hours. Then, there is the painting phase, with only paints made with water, and the packaging, made with materials from recycled and custom-made packs.
